

Fever and warning signs in children

A fridge cheat sheet, based on pediatric guidelines

Fever: when to see a doctor

AGE	TEMPERATURE	WHAT TO DO
Under 3 months	38.0°C (100.4°F) +	See a doctor urgently, even at night
3 to 6 months	38.0°C (100.4°F) +	Call your pediatrician
Over 6 months	39.0°C (102.2°F) +	Call your pediatrician
Over 6 months	over 72 h	Fever lasting: call your pediatrician
Any age	40.5°C (105°F) +	Get urgent medical help

Call emergency services right away if your child:

- ! is floppy, very hard to wake or not responding
- ! struggles to breathe, makes a high-pitched sound breathing in, has blue lips
- ! has a seizure or a stiff neck
- ! has spots that do not fade under a glass
- ! is drooling and unable to swallow

The glass test

1. Press a clear glass firmly against the rash.
2. Spots fade: keep watching, with a fever call your pediatrician.
3. Spots do NOT fade: call emergency services now.

How to take a temperature

- Under 3 months: rectal (most accurate).
- Armpit: easiest but least accurate.
- Forehead from 3 months, ear from 6 months.

Emergency numbers

911 US and Canada **999** UK **112** European Union

Pediatrician / clinic: _____ phone _____

Readings, medicines given and these thresholds, also on your phone. Both parents see the same entries.
